

LABORATORY OBJECTIVES—Lab #1:

After completing this laboratory assignment, the student should be able to:

Identify major structures of oral anatomy.

1. Locate the three major pairs of salivary glands and name their secretions.
2. Describe the difference between deciduous teeth and permanent teeth with reference to numbers and kind.
3. Identify the four types of permanent teeth and the number of each.
4. Label the major structures of a tooth.
5. Identify the organs of the alimentary canal and know their functions.
6. Identify the accessory organs of digestion and know their digestive functions.
7. Be aware of and practice laboratory safety.
