

Welcome to Anatomy and Physiology Lab SCIT 1408

This page will take you to resources you will use in your SCIT 1408 lab. Before you go to lab, take note of the assignment for that week and look at the objectives which tell you what you are supposed to learn after completing this lab.

If you are new to El Centro and took your SCIT 1407 somewhere else, please read the document named “Laboratory Instructions for New Students”.

Print off an answer sheet and take it to lab to answer your lab questions. You will turn in this answer sheet as your laboratory report.

If you are using the Tenth Edition of HOLE’S HUMAN ANATOMY AND PHYSIOLOGY, or the Third edition of ANATOMY AND PHYSIOLOGY LABORATORY TEXTBOOK, your corresponding page numbers will be in the document titled “Page Numbers for the Tenth and Third Editions”.

If you would like your own copy of the lab questions, you may print a copy from the document named “Questions for Lab 1”, etc.

For each lab, there is a list of Study Guide Modules. This list includes every structure you might be asked about on a lab quiz or practical. The Study Guide Outline of Laboratory Modules is also a good study tool for lecture exams. You should be able to identify each structure in the Study Guide Modules, you should know where it is located, and you should know the function of the structure.

The document titled “Laboratory Safety” is a summary of our safety procedures for lab. Please look this over and be familiar with our procedures. Safety, for you and for us, must be job #1!

While your instructor may post a copy of the syllabus on the course web site, there is also a copy posted here under “Syllabus”.

Have a great semester in SCIT 1408!
